

**Ag Resource  
Planning and Management Cycle**

***A True Farm Management System***

**To get started, contact AgRePlan and schedule an on Farm consultation**

We will come out to your farm to hear your story, and learn about your operation

- We will then suggest products and services that may solve some problems for you
- We will suggest a course of action that fits your needs and your financial situation.
- We will then together formulate a plan to accomplish your goals
- AgRePlan will get to work

**AgRePlan's 4 R concept**

**Right Time**

**Right Placement**

**Right Rate**

**Right Water**

## Who We Are

### About Us

We are a collection of industry experts, with knowledge we want to provide to our customers to make them more successful

*Ever wonder where to start?*

## AgRePlan the market leader in precision technology

### 25 years of experience...

We are veterans in this industry, We have been actively involved in the industry for 25 years, and have a complete understanding of the growing system, and how precision technology interacts with it. We also know exactly what technology makes our customers more successful than other similar companies can. We are systems integrators, who applaud the OEM's for their integrated solutions. However all that great equipment is in need of prescriptions and management strategies to gather all the value in your investment.

### Ever wonder what software the professionals use?

We use a lot of different software, but the majority of our work happens in AGIS. Today folks say, wow the things AgRePlan does are 10 years ahead of the industry. Funny thing is we have been hearing that same thing for 25 years.

---

*"We have customers seeing 300+ BPA Corn Yields in larger and larger areas of the field... We have the skills and the ability to help anyone seek those yield levels. The secret is to focus on the details. There are no cookie cutter approaches that will get you there..."*

---

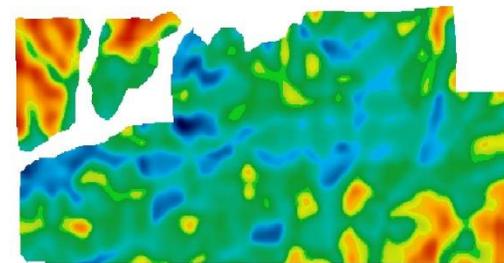

**-John Wagner, President AgRePlan, LLC**

### For the DIY customer AGIS can be purchased

In the many years of managing precision ag data, the one thing I can say is a happy customer is an engaged customer. A customer who dives right in and does his own work. Consulting and training with AgRePlan

### For the customer who wants to be less involved, but still see their data

We have Viewpoint software. This is free to all customers that are current in the program.

*Advanced Precision Management Zones*

Advanced Precision Management Zones Based on facts, not pictures, or feelings... APMZ is based on soil texture from Veris, Elevation data from RTK GPS and derivatives of elevation data that describe terrain and texture interaction to yield. Terrain and texture describe 80-85% of yield variability. This allows us to repair under performing areas, and bring inputs down to match output levels on ground that is yield limited and a repair is not possible or feasible.

### Our Products and Services

- Water Management Services
  - Topography Mapping
  - Surface Drainage Planning
  - Tile Drainage Planning
- Veris Mapping
- Soil Testing
- Variable Rate Rx's
- Variable Rate seeds
- Variable Rate N
- Terrain analysis
- Management System creation and planning
